

STAGESOUND

STAGESOUND 10

STAGESOUND 10 Mixer Front Panel

The Stagesound range of easy to use, high quality PA systems sets a new standard in easy to use portable sound.

There is a choice of two models in the series comprising a powered mixer and a pair of two way speakers. Portability of the system is maximised by storing the mixer inside one speaker and a pair of two way speakers. The speakers can be floor /desk mounted, angled for monitor applications or mounted using the optional SPS3 stands. Professional mic channels, stereo inputs and quality DSP effects will give you great results

far bigger than the systems modest dimensions!

In addition to the main speakers a Monitor Output is also provided. This can be useful to supply an on stage monitor system for the musicians, or used to feed a larger PA system in bigger venues. The powered mixer can be used while still stored in the speaker, ideal when space is short. Using the optional MXS1 stand positions the mixer at the ideal height for easy access to all controls.

STAGESOUND 8 200W of Power

A total of 6 inputs, 2 mic/line and 2 stereo channels, give the flexibility to connect what you require. The mic channels can be routed to the DSP effects providing the professional touch to any vocal. The stereo inputs use jack and RCA phono connectors making them compatible with most playback equipment. Two band EQ on all channels offer tonal balance and the Record Output lets you record your set or meeting without additional microphones. The amplifiers supply 100 Watts per channel into the full range (8" bass) speakers.

STAGESOUND 10 240W of Power

Includes all the features of the Stagesound 8 but with more input channels and more power. A total of 8 inputs, 4 mic/line and 2 stereo, and an impressive output power of 120 Watts per channel. The full range speakers feature 10" bass drivers.
